Art Unit: 2815

The terminal disclaimer filed on 1/26/10 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of 7,317,047 has been reviewed and is accepted. The terminal disclaimer has been recorded.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 20, 40, 41 and 45 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The specification discloses silica nanoparticles dispersed in the polymer to reduce conductivity, however, metal nanoparticles increase conductivity. Note the last page of the specification and "Invention Example 7" where "nanoparticles such as...metal or carbon nanotubes dramatically increases the conductivity". Also, metal nanoparticles would not be expected to reduce conductivity in polymers. Metals are conductors not insulators. If applicant disagrees he is invited to prove such allegations.

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 20, 40, 41 and 45 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Because the claims now recite contradictory results and contradict the original disclosure, the claims are considered indefinite, as the intended claim structure is contradictory and not understood. As stated above, metal nanoparticles should increase the conductivity whereas silica or alumina nanoparticles should decrease the conductivity of the polymer.

Additionally, the claims are indefinite as the standard of comparison is indefinite: "reduced" from what conductivity value, or under what condition?

The previous art rejections of 6/29/09 under 35 USC 102/103 over Elschner, or over Lamansky, are repeated here and applied to the claims as best understood.

Applicant's arguments filed 12/28/09 have been fully considered but they are not persuasive. The claims have not overcome the rejections because the claims are new matter, contradictory to the specification, confusing and indefinite.

Additionally, Elschner discloses silica or alumina nanoparticles mixed in polymer in claim 26. Applicant's arguments regarding titanium oxide particles in polymer are not convincing because the claims are indefinite and there is no unequivocal proof the polymer/nanoparticle buffer layer of Elschner does not meet the "reduced" conductivity of the claims, particularly where silica or alumina nanoparticles are practiced rather than titania particles.

Application/Control Number: 10/669,422 Page 4

Art Unit: 2815

Applicant's arguments regarding Lamansky are unconvincing for indefiniteness, as above, and further because the claims do not recite any particular polymer formulas or structures distinguishing over Lamansky. The argument that Lamansky's "polymer" is not conductive whereas applicant's "polymer" is conductive, is not persuasive absent clear recitations of polymer distinction. There are no magnitudes of conductivity in claim 20, and claim 41 recites conductivity less than about 10E-3 S/cm. Clearly if the polymer in Lamansky is less conductive than applicant's polymer, or "non-conductive" as argued, it clearly meets the limitation of "less than about 10E-3 S/cm".

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
